

James Duong

San Diego, CA | duongjames7@gmail.com | (619) 538-5556

EDUCATION

San Diego State University

Bachelor of Computer Science

Expected Graduation: May 2026

San Diego, CA

- Cum Laude | **Overall GPA: 3.6/4.0**
- Courses: Data Structures, Algorithms, Operating Systems, Computer Architecture, Advanced Programming Languages, Artificial Intelligence, Database Systems, Machine Learning

EXPERIENCE

Capstone Software Engineer (Frontend) - Adaptive Testing Platform SDSU

August 2025 - Present

- Built and shipped **15** responsive UI screens across student + instructor workflows (authentication, dashboards, profile, settings, modals, role-based quizzes) using **React + TypeScript**.
- Integrated RBAC with backend auth endpoints, ensuring frontend enforcement matched server-side permission rules (session/token handling, protected routes, and role-specific navigation).
- Integrated **20+ REST endpoints** (Django REST backend) including auth/session handling, CRUD flows, and robust loading/error states; ensured consistent request/response contracts.
- Implemented **10** product features end-to-end (UI → API integration → edge-case handling), improving usability and reducing user-facing issues by strengthening validation and state handling.
- Improved perceived performance by optimizing rendering and request patterns (debounced inputs, smarter loading states, reduced redundant requests) - **25% smoother** UI interactions
- Collaborated on a **4-person** Agile team (Git + code reviews); delivered features in small PRs and resolved bugs quickly through logging, reproducible test steps, and regression fixes.
- **Deployment (in progress)**: Dockerized app and preparing cloud deployment (**1-click deploy** plan via Render/Vercel/AWS) with environment configs + database migrations.

PROJECTS

Personal Portfolio Website

HTML | CSS | JavaScript

- Built a responsive portfolio with **5** sections (About/Projects/Experience/Contact) optimized for recruiter scanning and mobile viewing.

AI Resume Matching Tool

Python | NLP | Doc2Vec | Pandas | Gensim

- Built a collaborative demo tool using Doc2Vec to measure how well resumes align with job descriptions, addressing challenges in vector-based similarity scoring and enabling faster, AI-supported pre-application analysis.
- Evaluated on **30** resume/job-description pairs to tune scoring thresholds and reduce false matches

SDSU Big Data Hackathon - Medical Conversation Summarizer App

Flutter | Python | NLP | PyTorch | October 2024

- Built a healthcare prototype in a weekend hackathon using Flutter (mobile) + Python (backend/services) in a team of 4.
- Implemented key user flows (booking/requests + feedback capture) and demoed a working MVP with a clean UI and functional backend integration.
- Wrote a product pitch + technical plan for summarizing clinical-style dialogues into structured notes (problem, users, constraints, privacy considerations).
- Designed a **3-stage pipeline**: (1) preprocessing + speaker segmentation, (2) summarization model, (3) post-processing into sections (HPI/Assessment/Plan).

LEADERSHIP & ACTIVITIES

App Development Club, SDSU - Workshops + team projects

Sep 2024 - May 2025

A.I. Club, SDSU - ML discussions + project ideation

Sep 2024 - May 2025

eLeet Coders Club, SDSU - Algorithms + interview prep

Sep 2023 - Present

TECHNICAL SKILLS

Programming: Java, C/C++, Python, Assembly, JavaScript

Web Development: HTML5, CSS3, JavaScript, React, Tailwind CSS

Libraries/Frameworks: NumPy, Pandas, PyTorch

Tools and Environments: Git, Docker, Unix/Linux, IntelliJ, Visual Studio Code, Jira
